Categories: Ceiling Hoist Systems, Ceiling Hoists

Tags: bariatric, mobility, slings, transfers, wheelchairs

The GH3 ceiling hoist system is a state-of-the-art system for dealing with the full spectrum of demanding lifting and moving needs encountered in professional care environments. This system has the big advantage that it is always ready for use - the lifting modules recharge while mounted on the rail. These lifting modules move near-silently using only a minimum of current. Transitions between rail sections are virtually unnoticeable for maximum comfort. Advanced digital systems provide numerous additional functionalities, including an integrated weighing system, service management and documentation for use. All these capabilities combine to make the GH3 ceiling hoist system the most cost-effective solution currently available for heavy-duty use in any professional care environment. ## Features & Benefits:

GH3 rails can be mounted on ceilings, walls or supporting pillars, with unsupported spans of up to 8 metres. Interconnecting elements make it easy to configure rail set-ups for virtually any building, space or requirements. The discreet, modern design can be made to blend into any style of architecture, interior or décor – either in new structures or as a retrofit. GH3 lifting modules can lift users weighing up to 350 kg with one lifting strap and 500 kg with two straps. Lifting speed up to 60 mm/sec, depending on configuration. Batteries in GH3 lifting modules are recharged continuously on the rail. Lifting modules available with an integrated drive motor and integrated weighing system. Cordless remote control available. Optional CareLift Management software provides data on how the system is being used. **Lifting module options**

## GH3 Lifting module

User-friendly and extremely powerful and fast lifting module for permanent installation.

Lifting capacity 200 or 250 kg

## GH3+ Lifting module

Ceiling hoist similar to GH3, but with options such as integrated scale, CareLift Management and Service monitoring system and even faster lifting speed.

Lifting capacity 200, 250, 300 or 350 kg

## **GH3 Twin Lifting module**

Heavy Duty ceiling hoist with double lifting strap.

Lifting capacity 250 - 500 kg

### **Optional Extras**

#### **GH3/GH3+ with drive motor**

For horizontal movement of the lifting module in the rail system the GH3 and GH3+ are available with a drive motor. They can be operated with standard hand control (with cord) or with optional infra red remote control.

#### **Scales module for GH3+**

The optional built in scales module for the GH3+ is ideal for monitoring changes in users' weight. Because the scales module is part of the hoist, it frees up as much as 30 cm of lifting height compared to solutions where scales are separate. The module provides weighing that is just as accurate as medically certified scales.

#### **CareLift Management (CLM) module for GH3+**

The optional CLM module for the GH3+ ceiling hoist provides reliable data about the number and types of lifts over a given period. This data is available as a downloadable text file for use in standard types of spreadsheet software, and as documentation for how the hoist has been used.

#### **Service module for GH3+**

The optional GH3+ Service module provides information on service details of the ceiling hoist system, including when the last safety inspection/service was carried out and when the next safety inspection/service is due. The LCD display on the hand control shows when the lifting strap, toothed belt or battery is due for replacement. The module can be used to vary the desired service intervals between 3-24 months for individual reasons.

## **Specifications:**
